

VISVESVARAYA TECHNOLOGICAL UNIVERSITY
“Jnana Sangama”, Belgaum-590014, KARNATAKA, INDIA

An Internship Report on

Shishu Sneh

*An internship report submitted in partial fulfillment of the requirements for the award of the degree of **Bachelor of Engineering in Information Science and Engineering** of Visvesvaraya Technological University, Belgaum.*

Submitted by:

Mehek Munir Ahmed Tanga(1AM22IS063)

Internship carried out at:

MindMatrix

Under the Guidance of:

Internal Guide

**Mr. Vishal K,
Professor,
Dept. of ISE,
AMCEC**

External Guide,

**Mr.Thirumal
MutalikDesai,
Program Coordinator,
MindMatrix**

Department of Information Science and Engineering
AMC Engineering College

2025-2026

AMC ENGINEERING COLLEGE

18th K.M, Bannerghatta Main Road, Bangalore-560083
2025-2026

Department of Information Science and Engineering

CERTIFICATE

Certified that the internship report entitled **“ShishuSneh”** carried out by **MEHEK MUNIR AHMED TANGA (1AM22IS063)**, bonafide student of AMC Engineering College in partial fulfillment for the award of Bachelor of Technology in Information Science and Engineering of the Visvesvaraya Technological University, Belgaum during the year 2025-26. It is certified that all corrections/suggestions indicated for Internal Assessment have been incorporated in the Report. The internship report has been approved as it satisfies the academic requirements in respect of Internship work prescribed for the said degree.

HOD

Dr. Rahmi R Deshpande
Associate Prof and Head,
Dept. of ISE, AMCE

Principal

Dr. Yuvaraju B N,
Principal, AMCEC

Internal Guide

Mr. Vishal K
Professor,
Dept. of ISE, AMCEC

Internship Coordinator

Ms. DivyaShree
Assistant Professor Dept.
of ISE, AMCEC

DECLARATION

I MEHEK MUNIR AHMED TANGA, a student of 8th semester Department of Information Science and Engineering, AMC Engineering College, declare that my Internship work entitled “ShishuSneh” is a bonafide work of mine. My internship project is neither a copy nor by means a modification of any other engineering project. I also declare that this project was not entitled for submission to any other university in the past and shall remain the only submission made and will not be submitted by us to any other university in the future.

ACKNOWLEDGMENTS

I have a great pleasure in expressing my deep sense of gratitude to founder **Chairman Dr. K.R. Paramahamsa** and **Executive Vice President Mr. Rahul Kalluri** for having provided me with a great infrastructure and well-furnished labs for successful completion of my internship.

I express my special thanks and gratitude to our Academic Advisor **Dr. Nagaraja R** for providing me with all the necessary advice for successful completion of my internship.

I express my sincere thanks and gratitude to our Principal **Dr. Yuvaraju B N** for providing me with all the necessary support successful completion of my internship.

I would like to extend my special thanks to **Dr. Rashmi R Deshpande**, Associate Professor and HOD, Department of ISE, for her support and encouragement and suggestions given to me in the course of the internship.

I would like to extend my special thanks to Internship coordinator **Ms. DivyaShree**, Assistant Professor, Department of ISE for her support and encouragement and suggestions given to us in the course of my internship.

I would like to thank my internship guide **Mr. Thirumal MutalikDesai**, for helping and guiding me throughout the internship period.

I am grateful to my guide **Mr. Vishal K**, Assistant Professor, Department of ISE, AMC Engineering College, Bengaluru for her constant motivation and timely help, encouragement and suggestions.

Last but not the least, I wish to thank all the teaching and non-teaching staffs of department of Computer Science and Engineering, for their support, patience and endurance shown during the preparation of this internship report.

MEHEK MUNIR AHMED TANGA (1AM22IS063)

Internship Offer Letter

To,
Mehek Tanga

Date : 8 December 2025

Subject: Internship Offer Letter– Android App Development using Gen AI

Dear Mehek Tanga,

Thank you for exploring internship opportunities with MindMatrix.io, a product of CL Infotech Pvt. Ltd., through the VTU Internship Portal. We are pleased to offer you an internship with our organization.

This internship will run for **13 to 15 weeks** as per VTU Guidelines. The Internship will provide you with hands-on exposure through guided tasks, structured modules, and practical projects on the MindMatrix Platform (<https://lms.mindmatrix.io>).

During the internship, you will be engaged in product application development, supporting feature implementation, testing, preparing documentation, and cross-functional collaboration. These activities will require you to apply your technical knowledge and demonstrate your professional skills effectively.

All internship policies and professional guidelines will be provided in the Internship Manual, which will be shared with you on the day of program commencement.

As part of the process, you are required to:

- Print this offer letter and fill in the Faculty Coordinator details below.
- Obtain HoD/Internship Coordinator signature with seal.
- Email the scanned copy back to us within one week of receiving it.

For onboarding instructions, please refer to the attached "Onboarding Steps" document. We look forward to your participation and wish you a productive Internship.

Warm regards,
Tirumal Mutalikdesai
Program Coordinator, MindMatrix.io

ABSTRACT

This internship report presents the work carried out at MindMatrix from February 1 to May 17, focusing on Android application development integrated with Generative AI concepts. The internship was designed to provide practical exposure to modern mobile application development and industry-relevant tools.

During the initial phase, certification programs including AgentBlazer Champion Certification and Android App Development using Kotlin were completed to build a strong foundation in programming and development practices. The primary focus of the internship was the development of a project titled “*ShishuSneh*”, which aimed to create a functional Android application prototype.

The application was developed using Kotlin and Jetpack Compose for building responsive user interfaces, along with MongoDB for backend data handling. Additionally, various AI-based tools were explored and utilized to enhance the development process and improve efficiency.

Throughout the internship, emphasis was placed on learning core Android development concepts, including UI design, state management, and application architecture. A working prototype of the “*ShishuSneh*” application was successfully developed, demonstrating the practical implementation of acquired skills.

The internship also involved solving coding challenges, which helped in improving problem-solving abilities, despite encountering certain difficulties during implementation. Overall, the experience contributed to strengthening technical knowledge in mobile application development and provided valuable insights into the integration of AI tools in software development workflows.

CHAPTER 1

COMPANY PROFILE

1.1 INTRODUCTION

In the current rapidly evolving technological landscape, there exists a significant gap between academic learning and industry requirements. Traditional education systems primarily focus on theoretical knowledge, often lacking practical exposure and real-world application. As a result, many students face challenges when transitioning from academic environments to professional careers. Bridging this gap has become essential to ensure that graduates are equipped with the necessary technical skills and industry readiness.

MindMatrix.io addresses this issue by providing a comprehensive platform that integrates academic learning with practical implementation. The organization focuses on experiential learning through real-time projects, coding challenges, and hands-on training modules. This approach enables students to gain a deeper understanding of concepts while applying them in real-world scenarios.

Furthermore, MindMatrix.io promotes collaboration between students, educational institutions, and industry professionals. By facilitating internships, mentorship programs, and industry interactions, the platform ensures that learners are exposed to current trends and expectations in the job market. This holistic approach helps students build confidence, improve problem-solving skills, and develop a professional mindset.

1.2 MISSION

The mission of MindMatrix.io is to empower students with practical skills, innovative thinking, and direct industry exposure through AI-driven learning platforms, hands-on laboratories, and strategic partnerships with leading organizations.

The organization aims to deliver high-quality education that aligns with industry standards, enabling students to develop technical expertise and problem-solving abilities required for real-world applications.

1.3 VISION

The vision of MindMatrix.io is to become India’s leading platform in bridging the gap between academic education and industry requirements by creating a future-ready workforce equipped with advanced technical skills, practical knowledge, and real-world experience.

In today’s competitive and technology-driven world, industries demand professionals who are not only academically qualified but also capable of applying their knowledge to solve real-world problems. MindMatrix.io envisions an educational ecosystem where students are trained beyond traditional classroom learning, enabling them to meet dynamic industry expectations with confidence and competence.

The organization aims to revolutionize higher education by integrating modern technologies such as Artificial Intelligence, Generative AI, and data-driven learning methodologies into the educational framework. By leveraging these technologies, MindMatrix.io seeks to provide personalized learning experiences, enabling students to learn at their own pace while continuously improving their performance through adaptive feedback systems.

Another important aspect of the vision is to foster strong collaboration between academia and industry. MindMatrix.io aspires to build a connected ecosystem where educational institutions, industry professionals, and students work together to create meaningful learning opportunities. This collaboration ensures that students are exposed to current industry trends, tools, and practices, making them better prepared for professional environments.

The platform also envisions nurturing innovation and creativity among students. By encouraging participation in research activities, innovation labs, and real-time projects, MindMatrix.io aims to develop critical thinking and problem-solving abilities. This approach helps students move beyond theoretical understanding and engage in practical implementation, thereby enhancing their overall skill set.

1.4 SERVICES

1.4.1 Executive Summary

MindMatrix.io provides a comprehensive set of services designed to bridge the gap between academic learning and industry requirements. The platform focuses on delivering a balanced combination of theoretical knowledge, practical implementation, and industry exposure to students.

The services offered are centered around AI-driven learning, hands-on training, project-based development, and career support. By integrating modern technologies such as Artificial Intelligence and Generative AI into the learning process, MindMatrix.io ensures that students gain relevant and future-ready skills. The structured learning approach, along with continuous evaluation and mentorship, helps students improve their technical capabilities and prepare for real-world challenges.

Overall, the services provided aim to create an ecosystem where students can learn, practice, innovate, and transition smoothly into professional careers.

1.4.2 MindMatrix Lock Screen: Initial Access and Information Layer

The *MindMatrix Lock Screen* represents the first level of interaction a user experiences before logging into the platform. It serves as an informational gateway where users can explore essential details about MindMatrix.io. At this stage, users can access sections such as Home and About Us, which provide an overview of the platform, along with its vision and mission. Information regarding the various programs and certifications offered is also available, helping users understand the learning opportunities provided. In addition, the platform allows institutions or individuals to request collaborations, thereby promoting partnerships and industry connections. Contact details are provided to assist users in reaching out for support or inquiries, while the consumer policy section ensures transparency by outlining terms, conditions, and privacy guidelines. Overall, this layer is designed to create awareness and provide users with a clear understanding of the platform before they proceed to log in.

1.4.3 MindMatrix Home Screen: User Dashboard and Learning Interface

Once the user logs into MindMatrix.io, they are directed to the MindMatrix Home Screen, which functions as the central dashboard for all learning activities. This section provides a comprehensive overview of the user’s progress, including enrolled courses and performance insights. Users can browse all available courses as well as access their personalized “My Courses” section, which contains the programs they are currently enrolled in. The home screen also includes a task list that displays assigned activities, deadlines, and ongoing work, helping users manage their time effectively. An integrated AI chatbot is available to assist users in resolving doubts, understanding concepts, and navigating the platform. Additionally, the user profile section allows individuals to view and manage their personal information, achievements, and progress. This centralized interface ensures a smooth and interactive learning experience by combining all essential features in one place.

1.4.4 MindMatrix Files: Resource Management and Learning Materials

The *MindMatrix Files* section is designed to manage and organize all learning-related resources within the platform. It acts as a centralized repository where users can access course materials such as notes, presentations, and other study resources. In addition, it stores project files, including source code and related documents, enabling users to revisit and improve their work. Assignment submissions and completed tasks are also maintained in this section, allowing users to track their progress over time. Certificates earned upon course completion are securely stored, providing easy access whenever required. Furthermore, the section may include practice resources and downloadable content that supports offline learning. By organizing all materials in a structured manner, the MindMatrix Files section enhances accessibility, improves learning efficiency, and ensures that users can easily manage their academic and project-related content.

1.4.5 Conclusion

The services offered by MindMatrix.io provide a comprehensive and well-structured learning ecosystem that effectively bridges the gap between academic knowledge and industry requirements. From the initial interaction through the lock screen to the centralized home dashboard and organized file management system, the platform ensures a seamless and user-friendly learning experience.

The integration of AI-driven learning, hands-on projects, and structured course management enables students to develop both theoretical understanding and practical skills. Features such as task tracking, chatbot assistance, and personalized dashboards further enhance user engagement and support continuous learning. Additionally, the organized storage of learning materials and project files ensures easy accessibility and efficient knowledge management.

Overall, the services provided by MindMatrix.io not only improve technical proficiency but also foster problem-solving abilities, innovation, and career readiness. The platform plays a significant role in preparing students to meet real-world challenges and succeed in their professional journeys.

1.5 SOFTWARE TECHNOLOGIES

During the internship at MindMatrix.io, various modern software technologies were utilized to design and develop the application effectively. These technologies played a crucial role in building a functional and user-friendly Android application while also enhancing development efficiency and learning outcomes.

The primary programming language used was Kotlin, which is widely used for Android application development due to its simplicity, safety features, and modern syntax. Kotlin enabled efficient coding practices and improved overall application performance. For designing the user interface, Jetpack Compose was used, which provides a modern and declarative approach to building UI components. It simplifies UI development by reducing boilerplate code and allowing developers to create responsive and dynamic interfaces.

For database management, MongoDB was utilized to store and manage application data. Its flexible schema and scalability make it suitable for handling dynamic data structures required in modern applications. Additionally, various AI-based tools and Generative AI technologies were explored during the internship to assist in development tasks such as code generation, debugging, and idea enhancement.

The development process also involved the use of Android Studio as the primary development environment, which provides tools for coding, testing, and debugging applications efficiently. Version control practices and modular development approaches were followed to ensure proper project organization and maintainability.

CHAPTER 2

ABOUT COMPANY DEPARTMENT

1.1 Overview of Department

The internship at MindMatrix.io was carried out in the Android Application Development and Generative AI domain, which focuses on building modern, scalable, and user-friendly mobile applications. This department is primarily responsible for designing, developing, and maintaining Android-based applications while integrating advanced technologies such as Artificial Intelligence and Generative AI.

The department emphasizes practical learning through real-time projects, coding challenges, and certification-based training. It provides a structured environment where students and interns can enhance their programming skills using technologies such as Kotlin and Jetpack Compose. The learning process includes understanding application architecture, UI/UX design principles, and backend integration.

In addition to development activities, the department also focuses on problem-solving and innovation by encouraging interns to work on projects such as “Namma Platform.” This helps in gaining hands-on experience and understanding real-world application development. The inclusion of AI tools further enhances productivity and allows interns to explore modern development techniques.

Overall, the department plays a vital role in bridging theoretical knowledge with practical implementation, enabling interns to become industry-ready professionals.

1.2 Organizational Structure

At the top level, program coordinators and project leads are responsible for planning the training modules, assigning tasks, and monitoring overall progress. They ensure that the curriculum aligns with industry standards and that students receive proper guidance throughout the internship.

Mentors and trainers play a key role in the structure by providing technical support, conducting sessions, and assisting interns in solving coding challenges. They guide students in understanding concepts, debugging code, and implementing best practices in development.

Interns and students form the core of the department, actively participating in learning activities, project development, and assessments. They are encouraged to collaborate, share ideas, and work on real-world problems to enhance their skills.

The structure also includes evaluation and feedback mechanisms, where student performance is continuously monitored through tasks, projects, and assessments. This ensures consistent improvement and skill development.

CHAPTER 3

TASKS PERFORMED

3.1 Work Schedule

To ensure the systematic execution of the “Shishu-Sneh – Baby’s First Year Guide” project, a detailed work schedule has been designed. This schedule spans over the development period and divides the tasks into weekly milestones, each focusing on specific modules such as user interface design, growth tracking, vaccination scheduling, and milestone monitoring. The structured plan enables efficient task management, proper utilization of resources, and continuous progress evaluation throughout the development cycle. Each phase of the project focuses on building and integrating individual features, ensuring that the application is developed in a modular and organized manner.

In Table 3.1, the work schedule is provided, outlining the timeline, weekly tasks, and corresponding milestones. This serves as a roadmap to achieve the project objectives in a timely and organized manner.

Table 3.1 Work Schedule

Month	Week	Task
Month 1	Week 1	Underwent internship orientation and gained understanding of workflow, tools, and Android development with Generative AI at MindMatrix.io.
Month 1	Week 2	Gained technical exposure to Android development concepts and explored the role of Generative AI tools in practical workflows.
Month 1	Week 3	Engaged in initial hands-on learning by working with tools and experimenting with AI-assisted Android application development.
Month 1	Week 4	Applied learned concepts in structured tasks, improving development skills, problem-solving, and understanding real-world app workflows.
Month 2	Week 1	Developed Android applications including a calculator app and superhero catalog using Kotlin and Jetpack Compose, focusing on UI design, logic implementation, and structured data handling.
Month 2	Week 2	Enhanced Android projects, initiated portfolio development, and began TaskSync app with CRUD operations using Room Database

		and improved UI design.
Month 2	Week 3	Performed requirement analysis, created use cases and UML diagrams, and studied system design concepts, Agile methodology, and Google Cloud Platform.
Month 2	Week 4	Explored AI-based development through codelabs, built UI components using Jetpack Compose, and implemented navigation and multi-screen application features.
Month 3	Week 1	Developed advanced Android applications using MVVM architecture, implemented unit testing with JUnit, and created adaptive UI layouts for multiple screen sizes.
Month 3	Week 2	Developed an Android Notes application using Kotlin with MVVM architecture, Room Database, Retrofit API integration, and image loading using Coil library.
Month 3	Week 3	Implemented DataStore for persistent storage, worked with Room Database using CRUD operations, and explored SQL fundamentals with coroutines and Flow.
Month 3	Week 4	Developed background task scheduling using WorkManager, implemented task chaining and constraints, and integrated Jetpack Compose with traditional Android Views.
Month 4	Week 1	Learned complete project development lifecycle, including planning, system design, user flow creation, and layered architecture for structured application development.

Table 3.1 Work schedule

3.2 Introduction

The main objective of the internship was to design and develop an Android application titled “Shishu-Sneh – Baby’s First Year Guide,” which focuses on supporting new mothers in managing their baby’s health during the critical first year. The application aims to provide a simple and user-friendly platform for tracking baby growth, monitoring developmental milestones, and ensuring timely vaccinations.

The project was developed to gain practical exposure to mobile application development and to understand how theoretical concepts can be applied in real-world healthcare scenarios. The application was built using modern technologies and tools, integrating frontend components such as user interface design and backend functionalities like local data storage and background task management.

Additionally, the use of AI-based tools during development helped in improving productivity, assisting in debugging, and enhancing the overall development process. The project reflects the practical learning experience gained during the internship and demonstrates the ability to build a meaningful application that addresses real-world problems.

3.3 System Requirements

Component	Specification
Operating System	Windows 10/11
IDE	Android Studio
Programming Language	Kotlin
Version control	GitHub
Processor	Intel i5 or higher
RAM	Minimum 8GB
Display	Android Emulator for testing
UI Toolkit	JetPackCompose

Table 3.2 Hardware and Software requirements

3.4 System Design

3.4.1 User Interface Design

The user interface of the application is designed using Jetpack Compose, which provides a modern and declarative approach to building UI components. The design includes multiple screens such as the home screen, dashboard, and profile section. The UI is structured to ensure easy navigation, responsiveness, and a clean layout. Special attention is given to user experience by maintaining consistency in design elements, proper alignment, and intuitive interaction.

3.5.2 Data Handling and Storage

The application uses Room Database (SQLite) for storing and managing data locally on the device. Data handling is designed to ensure efficient storage, retrieval, and updating of information related to the baby’s health records, including growth data, vaccination schedules, and milestone tracking.

The system ensures that all user and application data are processed in an organized and structured manner using entities and data access objects (DAOs). This approach improves data consistency and simplifies database operations.

Since the application follows an offline-first approach, all core functionalities work without requiring internet connectivity. The use of Room Database ensures data privacy and reliability while enabling smooth interaction between the application interface and the local storage system

3.4.3 Navigation and User Flow

The navigation system of the Shishu-Sneh application is designed to provide seamless movement between different screens, ensuring a simple and intuitive user experience. Users can easily navigate between key features such as the dashboard, growth tracker, vaccination schedule, feeding guide, and milestone checklist.

The navigation flow is structured to minimize complexity and is optimized for first-time smartphone users, especially mothers from rural and semi-urban backgrounds. Clear buttons, simple layouts, and well-defined sections are used to guide users through the application without confusion.

The dashboard acts as the central hub, allowing users to access all major functionalities quickly. Overall, the navigation design focuses on ease of use, accessibility, and efficient interaction, ensuring that users can access all required features smoothly and without difficulty.

3.4.4 Feature Integration

The system integrates multiple features such as task management, course access, and user profile management. Each feature is designed as a separate module, allowing independent development and easy updates. The integration ensures that all features work together smoothly within the application, providing a unified user experience.

3.4.5 AI Integration

AI-based tools are incorporated into the development process to enhance functionality and efficiency. These tools assist in tasks such as code generation, debugging, and improving application performance. The integration of Generative AI also supports intelligent features and enhances the overall development workflow.

Fig 3.1: System architecture diagram

3.5 Implementation

3.5.1 User Interface Implementation

The user interface of the application was developed using Jetpack Compose, which enables a declarative approach to UI design. Various screens such as the home screen, dashboard, and profile section were created with responsive layouts. UI components such as buttons, lists, and text fields were implemented to ensure smooth interaction. Special attention was given to maintaining consistency in design and improving user experience through proper alignment and visual hierarchy.

3.5.2 Data Storage and Integration

The application uses MongoDB for storing and managing data. Data integration was implemented to ensure smooth communication between the frontend and backend. The system handles storing user-related data and retrieving it efficiently when required. Proper data management techniques were followed to maintain consistency and improve performance.

3.5.3 Feature Development and Logic Implementation

Core features of the application, such as task management, course access, and navigation, were implemented during this phase. Logical operations were developed to handle user interactions and ensure correct functionality of the system. The implementation focused on creating modular and reusable components to improve maintainability and scalability.

3.5.4 Testing and Debugging

The application was thoroughly tested to identify and resolve errors. Debugging techniques were used to fix issues related to functionality, UI, and performance. AI-based tools were also utilized to assist in debugging and improving code quality. Testing ensured that the final application runs smoothly and meets the required performance standards.

Fig 3.2 Application Flow diagram

Fig 3.3 Use Case Diagram

Fig 3.4 UI Design Prototype

3.6 Platform

The development of the application was carried out using modern tools and technologies suitable for Android application development. The primary programming language used was Kotlin, which provides a concise and efficient way of writing code. The user interface was built using Jetpack Compose, which simplifies UI design and enhances responsiveness.

The development environment used was Android Studio, which provides comprehensive tools for coding, testing, and debugging. For database management, MongoDB was used due to its

flexibility and scalability. Additionally, AI-based tools were utilized during development to assist in coding, debugging, and improving productivity.

3.6.1 Programming Language

The primary programming language used for developing the application is Kotlin. Kotlin is widely preferred for Android development due to its concise syntax, improved safety features, and interoperability with Java. It simplifies coding by reducing boilerplate code and enhances readability, making it easier to develop and maintain applications. The use of Kotlin enabled efficient implementation of application logic, improved performance, and better handling of modern Android development requirements.

3.6.2 Libraries and Tools

Various libraries and tools were used during the development of the Shishu-Sneh application to enhance functionality and streamline the development process. The development environment used was Android Studio, which provides comprehensive support for coding, debugging, and testing Android applications. For designing the user interface, XML layouts were used to create simple and user-friendly screens suitable for the target users.

For data management, Room Database (SQLite) was utilized to store and retrieve application data efficiently in an offline environment. WorkManager was used to implement background tasks such as vaccination reminders, ensuring reliable notification scheduling even after device restarts.

Additionally, MPAndroidChart library was used to visualize baby growth data through graphical charts. Testing tools like JUnit were used to ensure the reliability and correctness of the application. Furthermore, AI-based tools were used during development to assist in coding, debugging, and improving overall productivity.

CHAPTER 4

RESULTS

4.1 Application Overview

The developed application “Shishu-Sneh” is a functional Android application created using Kotlin. The application provides a structured platform where users can access features such as growth tracking, vaccination schedule, feeding guidance, and milestone monitoring. The system successfully demonstrates the integration of UI components, navigation, and local data handling.

Fig 4.1 Splash Screen

4.2 Features Implemented

The application includes several core features such as growth tracking, vaccination schedule, feeding guidance, and milestone monitoring. Users can navigate through different sections seamlessly and interact with the system efficiently. The implemented features reflect the practical understanding of Android development concepts and real-world application building.

Fig 4.2 User Registration and Login Screen

4.3 User Interface Performance

The user interface of the application is responsive and user-friendly. The use of XML layouts ensures proper structuring of UI components and smooth interaction. The layout is designed to provide a consistent and intuitive user experience, minimizing complexity in navigation.

Fig 4.3 Dashboard / Home Screen

4.4 Functional Performance

The application performs its intended functions effectively, including navigation, data handling, and feature execution. All implemented functionalities such as growth entry, vaccination tracking, and milestone monitoring operate without major issues. The system ensures smooth interaction between different modules.

4.5 Data Handling and Storage Results

The integration of Room Database allows efficient storage and retrieval of data. The application successfully manages baby health records and ensures consistency in data operations. Data flow between the user interface and local database is handled effectively.

Fig 4.4 Growth Tracking Chart Screen

4.6 Testing Results

The application was tested for functionality, performance, and usability. Various test cases were executed to ensure that all features work as expected. Debugging was performed to resolve errors, and the final application showed stable performance.

Fig 4.5 Vaccination Reminder Screen

Fig 4.6 Notification Reminder Screen

4.7 Performance Optimization

Performance improvements were made during development to enhance application responsiveness. Efficient coding practices and debugging techniques helped reduce errors and improve execution speed. The application runs smoothly on Android devices and emulators.

4.8 User Experience Evaluation

The application provides a simple and intuitive user experience. The navigation flow is easy to understand, and users can access features without confusion. The design ensures clarity and usability, which enhances overall interaction.

4.9 System Output

The final output of the project is a working prototype of the “Shishu-Sneh” Android application. The application successfully integrates UI design, data handling, and functional features into a single system. It demonstrates the practical implementation of Android development concepts learned during the internship.

4.10 Final Output

The completed application serves as a proof of concept for a scalable Android platform. It highlights the ability to design and develop a real-world mobile application using modern technologies and tools. The project reflects the successful completion of internship tasks and the achievement of learning objectives.

Fig 4.7 Application Running in Android Emulator
